PROBLEM install macOS Mojave please

Beitrag von „Panther“ vom 8. Oktober 2018, 18:29

As mentioned before by [al6042](#), we need some information and parameters about your problem.

1. What hardware do you use?
2. Which version of CLOVER do you use?
3. What do you want to install? **macOS Mojave (clarified)**
4. What is your problem?
5. What has been tried so far?

Basically, the support will only be satisfactory if the information and the problem are explained in detail beforehand.

The forum offers:

- A) an upload option
- B) the possibility to enter the hardware in the profile data

That's a lot of work done.

The Wiki here in the forum is only available in German. Nevertheless it serves as a guide and some topics can be translated in a relaxed way.

Based on that there will be an answer for sure. Thank you!
