Unfortunately, I can not look, [user = '1'] griven [/ user] did you delete at sonicman filesystem?

[user = '17297'] sonicman [/ user] Did you adjust your [BIOS Settings](#) and did you disable your iGPU?

Ok, I do not have an external graphics card in this machine. I thought that was a problem only with intel hd 4600 igpus not hd 4000 also. What other adjustments need to be made with the bios? I have a HD 7000 card laying around some where.
