

## Erledigt VRAM erhöhen HD630

Beitrag von „Noir0SX“ vom 13. Oktober 2018, 18:49

Kann es sein das deine IntelHD von einer DSDT egebunden ist ? Hatte so nix in der plist gefunden.

Die Änderungen sind hier zubinden, nimm dort mal die Zeile ig-platform-ID raus, vll ist das der Grund für Pink

The screenshot shows a plist editor window with a table of properties. The table has four columns: 'Device', 'Property Key', 'Property Value', and 'Value Type'. The 'Device' column contains 'IntelHD:AppleIntelHD:AppleIntelHD'. The 'Property Key' column lists 'translucency-enabled', 'translucency-quirk-enabled', 'translucency-quirk-fix', 'ig-platform-id', and 'translucency-fix'. The 'Property Value' column shows '00000000', '00000000', '00000000', '00000000', and '00000000' respectively. The 'Value Type' column shows 'DATA', 'DATA', 'DATA', 'DATA', and 'DATA'.

Device	Property Key	Property Value	Value Type
IntelHD:AppleIntelHD:AppleIntelHD	translucency-enabled	00000000	DATA
	translucency-quirk-enabled	00000000	DATA
	translucency-quirk-fix	00000000	DATA
	ig-platform-id	00000000	DATA
	translucency-fix	00000000	DATA
