Do I find a solution to this problem

Beitrag von „al6042“ vom 23. Oktober 2018, 17:26

That might be the case if the internal Graphics is deactivated in your BIOS.

If so, than everything's good so far.

Open your Clover config.plist with the latest version of "[Clover Configurator](#)" and go the the "Graphics"-section.

In there you should tick the "Inject ATI" and add the "FB Name" called "Hydrilla".

In regards to the [ati.c from Clover](#), that should be the correct framebuffer (FB) to get the card running.
