

Anleitung: High Sierra auf HP Elitebook 8460p mit Intel Core i7-2620M und ATI HD 6470M

Beitrag von „anonymous_writer“ vom 28. Oktober 2018, 15:35

Hi [gamal](#) ,

As you can see in the picture post 1, Radeon HD 6470M works with the EFI-Folder in Post 1.

These was a very early versions of High Sierra.

I do not have the laptop anymore and therefore I can not test newer High Sierra versions. In version 10.13.6 Apple changed someting of the graphics. Therefore, I can only recommend you to test an older High Sierra version.

This EliteBook was always a disaster with OS X, so my recommendation would be to switch to another more compatible laptop.
