DarBoot - APFS Booteinträge mit Ozmosis

Beitrag von „MrVanosh“ vom 4. November 2018, 16:06

Someone knows why DarBoot show error that isn't support on my platform? Today I started my PC and I don't see any mac OS boot option, I tried run shell but i checked all fs* and I can't access macOS partitions 🤔 When I booted to windows i opened DarBootLog.txt and I see this error

```
01:490 (00:000) | *****
01:490 (00:000) | This version of DarBoot is not supported on this platform!
01:490 (00:000) | *****
01:490 (00:000) | Reason: EAT THAT!
```

Now I'm trying to recover files from this APFS partition and I will reinstall macOS.
