GA-Z77m_d3h sleep is also normal, But it can't wake up.

Beitrag von „wzlzy1978“ vom 10. November 2018, 02:57

My dear friend,

Please help me, please.

I really appreciate your work and effort.

After I used your ROM,

All hardware can be used.

All plug-ins are loaded, too.

The list of components that can be loaded is as follows:

ACPI_SMC_PlatformPlugin

AppleACPIPlatform

AppleHDA

AppleIntelCPUPowerManagement

AppleIntelCPUPowerManagementClient

AppleHPET

AppleLPC

AppleRTC

AppleUSBHCI

X86PlatformPlugin

X86PlatformShim

Computer sleep is also normal.

But it can't wake up.

If we want to wake it up, it will restart.

The following is the list of running logs.

Nov 9 17:38:01 lindeiMac StatusBarApp[338]: goingToSleep ==>

Nov 9 17:38:01 lindeiMac StatusBarApp[338]: mOSHibernatemode: 0

My hardware list is as follows

1. Manufacturer: Gigabyte
2. Model: Z77M-D3H
3. Chipset: Z77
4. Bios Version: F15
5. Bios Link:

[Mod für das Z77M-D3H Rev.1.0](#)

<https://www.hackintosh-forum.d...7md3h-highsierra-15a-zip/>

6. OS version: high Sierra and Sierra
7. Others: i7 3770T
8. Graphics card: GTX750
9. PS/2 keyboard

Please help me, please.
