macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „Si Vis Pacem“ vom 13. November 2018, 16:43

[Zitat von Jakushevich](#)

With the iGPU disabled, everything is working fine.

Most likely wrong ApplePlatformID and/or wrong RAM amount for the iGPU.

Had this happen to me as well. With the wrong ID and right amount of RAM for the iGPU I got reboots. Also with right ID and wrong amount of RAM.

Addendum:

[Intel HD4000, connectors and RAM on blog.stuffedcow.net](#)
