Erledigt macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „chenchangjv" vom 14. November 2018, 05:50

Update: My failure was caused by an old AppleALC, now it works well. Thanks!

Hello, I have a B85m-D3h with E3 1231 v3 and gtx760

Now I have installed a build of ozmosis by other people, and launched system successfully.

But the ozmosis doesn't contain kexts for LAN and sound, I'm seeking your help about how to inject the kexts to system or to some EFI part?

I have placed them in EFI/Oz/Darwin/Extensions/Common and use Kext Utilities, but both of them didn't work. (I'm sure I have found the true EFI part because I have put the kexts to all EFI parts that exists)

Thank you 🙂
