Nice...

Wifi card is now working.

Before I was on Sierra (not High Sierra)..

For this Mojave, I attempted to install Mojave first then Windows 7. But when it boots it runs Windows instead of Clover. Then I tried to re-install clover in EFI, finally when reboot I found no option for OS, just Clover menu. Then i attach my USB installer and boot from it, Windows and Mojave exist...

FYI: I just use your EFI in my own EFI (no clover addition installed)
