[416c](#) und [grt](#)

guckts du mal hier----...

<http://x220.mcdonnelltech.com/>

@ "mcdonnelltech" ... immer mal hilfreich (Thanx..) bzgl. INFOS.. auf der Seite runter scrollen und dann hier diese passage ; -->>>>

Zitat :

" Recommended additional steps to improve battery life with optimized CPU power management:

1. Confirm that you have an active connection to the Internet
2. Open *Applications > Utilities > Terminal* then copy and paste the following command in the Terminal window and hit *Enter*:

Code

```
1. curl -o ~/ssdtPRGen.sh https://raw.githubusercontent.com/Piker-Alpha/ssdtPRGen.sh/master/ssdtPRGen.sh
```

3. Next, paste this command in the Terminal window and hit *Enter*:

Code

```
1. chmod +x ~/ssdtPRGen.sh
```

4. Finally, paste this command in the Terminal window and hit *Enter*:

Code

```
1. ./ssdtPRGen.sh
```

5. Answer 'N' to the questions about copying and opening the ssdt files
6. A customized *SSDT.aml* for your specific machine will now be in the directory

/Users/yourusername/Library/ssdtPRGen

7. Copy the file named *SSDT.aml* to */Volumes/EFI/EFI/CLOVER/ACPI/patched/*
(you may need to run *Clover Configurator* to mount the EFI partition)
8. Restart the computer "

lg gerox 

P.S. ist ja wirklich "ne harte Nuss " dieser X121E
