Intel NUC - Bean Canyon - NUC8i7BEH

Beitrag von „thanman" vom 8. Dezember 2018, 10:17

thanks for this post and to the original poster. The CLOVER.zip folder worked very well on a fresh install on my NUC.

One thing is I have a NUC8i5BEK. I've tried Intel GFX and HDMI Audio which works great but Ethernet does not work at all.

I don't have a en0 in ifconfig. I have confirmed IntelMausiEthernet.kext is in EFI/kexts/Other and it appears loaded when I run kextstat as version 2.4.0d0. I am on Mojave 10.14.2.

Is there anything simple / basic I can try?
