Regular booting time is between 5 to 7 seconds (counting starts when the white progress bar is visible) on a "regular" Mac with internal (PCI) SSD. Takes around 2-3 seconds longer when the Mac model is prior 2015. Booting time for Macs with SATA SSD is around 12 to 15 seconds. Just to give you a perspective. 25-30 seconds is booting time for a Mac with spinning HD.
