macOS 10.14.1 + Vega 64: H.264 Encoding auf Rot

Beitrag von „Philippe31415“ vom 21. Dezember 2018, 12:29

Dear - Thank you for your patience and help

I have an ASUS Z370 G-GAMING motherboard, 32Gb RAM 3000Mhz, i7-9700 processor, and a ROG Strix RX VEGA 64 OC-8Gb. 10.14.2 - except in FCPX the sharing is done in reality and is not done. But no success (Quick Sync setup / HEVC & H.264). Anyone any suggestion on where I should start looking? Thanks
