

# WhateverGreen - Fix für alle Grafikkarten (AMD/Intel & Nvidia)

Beitrag von „Noir0SX“ vom 2. Januar 2019, 15:03

## v1.2.6

- Added `applbk1=0` boot argument to temporarily disable `AppleBacklight` patching code
- Fixed AMD Verde CAIL injection logic
- Fixed breaking backlight on Apple hardware, on laptops with AMD GPUs, and on 10.11 or earlier
- Changed CFL backlight patches to enable by default on CFL drivers only (avoids issues with faux "KBL" 8xxx CPUs)
