"Clover Config" i9 9900k + Aorus Master Z390

Beitrag von „DannyElevator“ vom 11. Januar 2019, 17:21

Describe what happens and take some screenshots,... otherwise no one will be able to help you... People are not good at clairvoyance around here... 😎

Maybe add your system config in your profile

Edit: Ok, that's a way to start putting that there. Now if you describe what happens, I or someone more proficient could try to help.. 😊 My system also isn't working perfectly, yet. But I can upload my latest EFI to you tomorrow. Have you checked the WIKI and other threads, then? What exactly - is- happening?

You don't have the i9 9900K, so you may change the smbios,... I used an imac 18.1, but that may not be right for your configuration. Maybe make your own thread for this,... because this was / is about the i9 9900k. Do that and try out different MacModels in the SMBios. Do not put "injectIntel= True". You can edit Clover from inside the clover boot menu when you go to "options". May do the trick.
