# Hängt sich beim Booten an unterschiedlichen Stellen auf (manchmal fährt er hoch)

Beitrag von „HackbookMaker“ vom 12. Januar 2019, 15:45

Das Problem ist ja, dass er nach der Installation sich überhaupt nicht mehr booten lässt mit der Intel + Nvidia aktiv. Nur Nvidia konnte ich nicht testen, weil der DISCRETE-Modus im BIOS nicht funktioniert (Wenn ich den aktivieren werden beide GPUs deaktiviert, normalerweise sollte das nur die Intel abschalten und per MUX das Display auf die Nvidia umschalten laut Handbuch). Ich dachte, dass ich die Intel-GPU (Da nativ unterstützt) so lange nutzen kann, bis irgendwann in ferner Zukunft mal ein WebDriver erscheint und dann wieder (Wie unter High Sierra) beide nutzbar sind.

Aber Stand jetzt muss ich immer mit -x booten, sonst bleibt er bei "Early Boot Complete. Continuing System boot." stehen, hier mal ein Bild:
