AORUS PRO Z390, i9 9900K, Radeon Vega56 - Reboot nach dem erstem Login nach der Installation

Beitrag von „Beppo68“ vom 12. Januar 2019, 19:38

Ok... sounds good.

i would like to try to go on an 18.3 with iGPU support. And I want to find out if my problems were solved by changing the USB ports or by the iMacPro 1.1 setting. For others, the iMac18.3 seems to work with iGPU. I'll let you know how far I'll get.
