AORUS PRO Z390, i9 9900K, Radeon Vega56 - Reboot nach dem erstem Login nach der Installation

Beitrag von „nhasan77“ vom 13. Januar 2019, 11:13

I have working iMac18,3 configuration on the same system now. The iMessage and jpeg/quicklook issues are also gone now. The iGPU is set to Auto in my case. Here is the EFI Folder. Hope that helps.

I am using EmuVariableUefi-64.efi.
