AORUS PRO Z390, i9 9900K, Radeon Vega56 - Reboot nach dem erstem Login nach der Installation

Beitrag von „CMMChris“ vom 13. Januar 2019, 15:36

Everyone using the Vega 56 or 64 should use the iMac Pro SMBIOS with disabled IGPU to get the most out of the Vega cards, especially with regards to the hardware encoding. DRM will also work fine. Using non ECC RAM and non Xeon processors doesn't cause any problems with this SMBIOS.
