macOS Mojave + Ozmosis ASUS MAXIMUS VII RANGER - ready

Beitrag von „linvydas“ vom 15. Januar 2019, 12:23

I flashed bios from this archive: [MAXIMUS-VII-RANGER-ASUS-3003.rom.zip](#) and this time pc posts with no problems. After a successful Mojave install I can't boot from ssd, I don't even get ozmosis bootloader screen. Tried USB flash drive with clover installed and it finds all partitions and I can boot into Mojave ssd. Tried resetting nvram, but that doesn't solve my problem.
