

Erledigt

## Sony VAIO High Sierra

Beitrag von „ralf.“ vom 17. Januar 2019, 07:54

Die Grafik ist doch etwas schwieriger zum laufen zu bringen

Hier ist noch ein andere Weg.

Code

1. Add [attach=94786][/] to Clover/ROM
2. Clover configuration-Graphics :
3. set Dual Link : 1 , FB Name : Velvet , Vram : 2,048 , Video Ports : 3 , Check Load Vbios ,Inject Edid , Inject ATI .
4. 3. Clover configuration- Kernel and Kext Patches :
5. Name : AMD6000Controller
6. Find HEX :
- ```
0004000004030000000100001204010500080000040200000001000011020403100000001000000000
```
7. Replace HEX :
- ```
0200000040000000090100002001000700080000040200000001000021030405100000001000000000
```
8. 4. Use one or the other,never both. 4a you'll have to repeat after every update,4b works aways with vanilla (untouched) AMDRadeonX3000.kext
9. 4a. (Old way) Open AMDRadeonX3000.kext/Contents/Info.plist and find AMDTurksGraphicsAccelerator, there find IOPCIMatch and add this 0x68411002 on the first place in the string
10. 4b. (New way) Clover Configuration-Devices : Fake ID : ATI : 0x67411002
