## Tutorial: El Capitan - AMD - Legacy Installation

Beitrag von „xShift“ vom 17. Januar 2019, 09:55

Hi, all! First, sorry for my language.

I run Mac OS installer under Acer Nitro 5 AN 515-42( Ryzen 5 APU 2500U + Radeon RX 560X ) but my Hard Drive not detected because AHCI controller vendor is AMD( device id 0x79021022 ). Have any ideas how to make AMD AHCI compatible with Mac OS? Maby I need some Clover patch for this hardware?
