Mit FBPatcher die richtige PlatformID für UHD620 gefunden - klappt trotzdem nicht

Beitrag von „casgti“ vom 17. Januar 2019, 12:07

Hi There,

can you share the .plist file, so I try it on my notebook (I have the same 8250U with UHD 620 on a HP elitebook)

BTW, do you use any SSDT or something else? ... how much memory you have on BIOS for video?

I am facing the problem that I get everything working BUT QE/CI & Metal on "no" ... so video is very laggy/not accelerated.
