# [Sammelthread] macOS Mojave 10.14 Developer Beta - Erfahrungen

Beitrag von „MacGrummel“ vom 25. Januar 2019, 08:43

Oder die fertig kompilierte Version [über unser Update-Tool](#) direkt von der SourceForge-Seite holen (ist übrigens die rev.4862) oder direkt [aus unserer Clover-Download-Abteilung](#):

The screenshot shows the GitHub repository for Clover EFI bootloaders. The repository name is "Clover EFI bootloader" and it is described as "Boot OS X, Windows, and Linux on Mac or PC with UEFI or BIOS firmware". The repository is brought to you by users: [apianti](#), [blackosx](#), [blusseau](#), [dmazar](#), and [slice2009](#).

The navigation tabs include: Summary, Files, Reviews, Support, Wiki, Discussion, Tickets, and Clover 2.0. The "Browse Commits" section is active, displaying a list of recent commits:

- [r4862] fix kext injection for Mojave by PMheart
- [r4861] better save and restore audio parameters
- [r4860] fix audio output numeration
- [r4859] startup sound variables will be stored under AppleBootGuid for legacy compatibility
