

Erledigt **DELL Inspiron 13 7370**

Beitrag von „tackerjim“ vom 31. Januar 2019, 05:33

Gerät ist da, aber folgendes Problem:

A screenshot of a boot log from a Dell Inspiron 13 7370. The log shows various boot steps such as 'Start CheckHibernate', 'efiboot loaded from device: Acpi(PNP0A03,0)/Pci(14|0)/Usb(0...', and 'Start OpenVolume'. The final lines of the log indicate a failure: 'ERROR!!! Uncompress prelinked kernel', 'ERROR!!! Load prelinked kernel with status 0x8000000000000007', and 'Error loading kernel cache (0x7)'.

```
Start CheckHibernate
End CheckHibernate
efiboot loaded from device: Acpi(PNP0A03,0)/Pci(14|0)/Usb(0...
efiboot file path: \System\Library\CoreServices\boot.efi
Start OpenVolume
End OpenVolume
Start ProcessOptions
End ProcessOptions
RegisterRestartDataProtocol: called. 0x9adb1618
RestartData protocol installed successfully.
Start SetConsoleMode
End SetConsoleMode
Start ReadKernelCache
End ReadKernelCache
Start UncompressKernelCache
End UncompressKernelCache
ERROR!!! Uncompress prelinked kernel
ERROR!!! Load prelinked kernel with status 0x8000000000000007
Error loading kernel cache (0x7)
```

Specs:

[Hier mal das Gerät...](#)

Ich komm ed weiter, ich habe nen USB [Install Stick](#) erstellt. Dann Clover installiert.

Und jedes mal kommt das angehängte Bild...
