Hi 😊

I dont have any HWMonitor or fan speed data. I didnt run any torture tests either. But what I can tell you is that the RX 580 is working just like in Windows. On Idle the fans are turned off completely. Of course if I run any applications which use the graphics card, the fans start to spin. The speed is bound to the temperature.

Everything runs fine. Completely satisfied with the system 😊 .

Gut zu wissen. Was hast du gemacht damit die USB Ports wieder funktionieren? Das Update auf 10.14.4 mache ich definitiv sobald es draußen ist. Die X.X.4 Versionen bringen immer große Neuerungen mit was Hardwareunterstützung angeht.
