macOS 10.14.4 Beta1, 2x Vega64

Beitrag von „kaneske“ vom 13. Februar 2019, 09:02

You could use this, but have to implement it to your Build.

File is from KGP's X299 [Distro](#) at Github.

Used for one Vega, make a second one with changed Values for the other Vega, for example Vega 1 sits in PC01 and the 2nd in PC02...
