Ein neuer Hackintosh soll das Licht der Welt erblicken

Beitrag von „esao“ vom 14. Februar 2019, 11:57

Hello, I hope it's ok to speak english... My german isn't good enough I guess... 😞 sorry

I've been trying to install Mojave for days on a GA-Z370P-D3 with a i3 8100 (I haven't installed the graphic card yet... One thing in a time.

It always freezes before the OSX installation load... I found your conversation about it. I tried the file you provided but it doesn't work 😞 I've been tweaking the config.plist as much as I could. I don't know what to do

Do you think you could take a look at it? Thanks a lot for your help
