Erledigt asus gl553vd

Beitrag von „mfortuna" vom 17. Februar 2019, 16:43

Hello, I have the same laptop that you, the Asus ROG GL553VD (with the i7-7700HQ processor). Can I ask you guys a couple of questions? I installed Mojave some days ago, using some of you files:

- What is your idle processor freq? Mine on idle is over 1.4 Ghz and I think that's no good.

- How did you make Fn keys to work? (I specially want to turn off/control keyboard backlight)

- How can I know if Nvidia GPU is off? I know I can't use it with Hackintosh but maybe it's using some power, I don't know really.

- Also, anytime I connect a 3.0 device I have to plug it in the 2.0 port otherwise I can't access.

I'm a little newbie but learning lots, sorry if Im asking a lot haha, hope you can help me!

Thanks!!
