

Radeon VII im Hackintosh

Beitrag von „Gigamaxx“ vom 20. Februar 2019, 16:41

That is strange my pentium g3258 System I have IGPU disabled.

My settings in bios MSI H97

PEG as primary display output

Multi monitor Disabled.

Maybe it is the AVX, AVX2 capabilities?

I will test tonight with my Ryzen 2700x System to see if it works.
