Clover Pre-Installation Probleme | Lenovo Thinkpad E580

Beitrag von „ituser01“ vom 6. März 2019, 22:21

Hi [JKony12](#),

I think it is better so give you my current CLOVER directory so you can replace your CLOVER by mine. For me following features are working:

- Audio (by using VoodooHDA.kext)
- Ethernet (by using RealtekRTL8111.kext)
- Trackpad (by using ApplePS2SmartTouchPad.kext); Note: Trackball doesn't work and touch gestures are not working; I still haven't found any way to make touch gestures working
- all USB ports are working with USB 2.0 and USB 3.0 devices; Note: I have used the Hackintool (see the post of [Harper Lewis \(Clover Pre-Installation Probleme | Lenovo Thinkpad E580 - Post #14\)](#))) to make my extern USB-C Dock USB-Ports working. If your USB ports are not working, you would have to generate your own USBPorts.kext by using this Tool
- Bluetooth (by using USBPorts.kext as written above)
- Webcam (by using USBPorts.kext as written above)

Following features are not working:

- WiFi (because the internal WiFi-Card is not compatible with macOS; I was not looking for compatible WiFi-Cards yet but I think you could find a lot of compatible cards with Google or here in this forum)

Other issues:

- after resuming from Stand-By sometimes bluetooth isn't available; maybe there is a fix, but currently I had not time to search for this

Other Notes:

- in my config.plist I have added a fix for HDMI output because per default the output had a pink color; now it is not pink and all colors are correct
- at first the cpu fan was working very strong; now I have enabled standby states of the CPU and now the fan is sleeping for the most time

I hope this is helpful for you. If you have any other trouble, let me/us now it 😊
