macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „witjojo“ vom 12. März 2019, 03:37

@[mosconijr](#)

See my post [#225](#)

But I think for your board you need the last Mojave Ready XMAX ROM from here: [Ozmosis Mod für Z97M-D3H](#)

You do not need a DarBoot.plist if you do not need any changes.

You can find a current KernnextPatcher.plist here: [KernnextPatcher XMAX.plist](#)

And you have to edit the Ozmosis Defaults.plist according to your own needs.

You can read more here: [Mojave Ready...](#)
