

Intel NUC - Bean Canyon - NUC8i7BEH

Beitrag von „sarkdavidson“ vom 17. März 2019, 15:30

Hey, Patrick! Are you going to test the eGPU? I can not boot with your EFI with my NUC8i7BEH, possibly because I am currently using the 0056 bios. Current EFI attached, i did manage to run with eGPU (rx560) and be able to render videos in FCPX with eGPU HW acceleration. But it can be unstable and automatically loses signals.
