Erledigt What do you tink about TINU so far?

Beitrag von „Thogg Niatiz" vom 25. März 2019, 01:40

It would be great to be able to repartition the target disk from within TINU to be able to place multiple macOS installers on one disk. Currently I can create multiple partitions on disks with >16G and then use TINU to place installers on each partition. I would like to be able to do than all within TINU: detect if there is space for multiple installer partitions on the target disk, offer to repartition and then placing the chosen installer, or maybe even something like bulk-placing all of the available installers onto the disk.
