Erledigt **What do you tink about TINU so far?**

Beitrag von „REVAN" vom 25. März 2019, 07:37

That's a pretty good idea. I also want to have multiple macOS Installer on one single usb drive. It would be so much easier to switch between them.

With that in mind it would also be great to make a simple update with tinu. I mean something like if I'm going to select a newer version of macOS installer - Tinu detects the partition of that installer and updates it.
