I do not understand. The name of the microphone does not change either.

In your ioreg, layout-id is 02 00 00 00 and alc-layout-id is 10 00 00 00.

Delete the bootflag alcid=16 in the Clover! Try this!

See under System Settings / Sound

outputs:

internal speaker (works yes / no?)

(if headphones are plugged in then the display changes from internal speaker to headphones)

Headphones (works yes / no?)

inputs:

internal mic (works yes / no?)
