macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „witjojo“ vom 12. April 2019, 16:05

Hi, I can not update to 10.14.4. I use the [KernextPatcher 10.14.4+](#) plist from [Fredde2209](#) but **i get a** black screen after first reboot on installation and nothing happens anymore. Nothing has been installed. I can also normal start 10.14.3.

I restart the PC and can choose again the "Installer 10.14.4" from bios boot menu. But still the same - black screen.

I have looked with the UEFI shell on the installation partition, all installations files are available.

Why does the update not work?

See pic on boot 10.14.3. Installer 10.14.4 is available. KernelPatch [06] for 10.14.4 also available.
