macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „kuckkuck“ vom 15. April 2019, 18:21

AppleACPICPU makes me feel like kextinjection isn't working properly. Probably the KernextPatcher isn't configured correctly. Try to inject the new 10.14.4+ KernextPatcher.plist into the KernextPatcher.ffi (i think there's an ffi on insanely) and flash it. Afterwards remove the Plist from your EFI.
