macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „griven“ vom 16. April 2019, 22:42

Haswell iGPU injection is a very common Problem. Disable all injections from OZ (defaults.plist) and use WhateverGreen.kext and Lilu.kext without any injections. WhateverGreen should do the trick. If not maybe a SSDT is needed to pass some properties to WhateverGreen...
