macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „txl263“ vom 23. April 2019, 06:10

hi @[kuckkuck](#) @[griven](#)

I flash my bios with [Z87D3HP_F7-XMAX.rom](#) and want to install mojave(already have 10.12 installed that upgrade from 10.11 with ozmosis) ,and now these happend.

1.Boot then press F12 ->select Install macOS Mojave from the boot menu. Hang on the bios logo and no response.

2.Boot then press DEL -> Want into bios setup screen. But there is only mouse point in black screen and mouse can not move.

3.Other system like Win10 and Linux seems normal.

My computer

OS: 64bit Mac OS X 10.12.6 16G1918

Kernel: x86_64 Darwin 16.7.0

CPU: Intel Core i5-4430 @ 3.00GHz

GPU: NVIDIA GeForce GTX 660

ozmosis history:

z87-d3hp-f7-1669 with MacPro3,1 defaults.plist set

upgrade with this page [Ozmosis-Package for MacOS Sierra - A guide for everybody](#) (Thanks @ [kuckkuck](#) again)

But can not boot with MacPro3,1 , So I write some keyword with command(because I replace OzmosisDefaults.plist was failed to boot and didnt konw why)

```
nvrAM 4D1FDA02-38C7-4A6A-9CC6-4BCCA8B30102:ProductName=iMac14,2
```

```
nvrAM                                     4D1FDA02-38C7-4A6A-9CC6-4BCCA8B30102:BiosVersion=IM142.88Z.0130.B00.1804091831
```

```
nvrAM 4D1FDA02-38C7-4A6A-9CC6-4BCCA8B30102:BiosDate=04/09/2018
```

```
nvrAM 4D1FDA02-38C7-4A6A-9CC6-4BCCA8B30102:ProductId=Mac-27ADBB7B4CEE8E61
```

```
nvrAM 4D1FDA02-38C7-4A6A-9CC6-4BCCA8B30102:SystemSerial=C02K5U8MF8JC
```

```
nvrAM 4D1FDA02-38C7-4A6A-9CC6-4BCCA8B30102:SystemVersion=1.0
```

So, for now every time after I flash the bios I need boot into linux and write these value with command [efivar](#) and then boot into macOS.

Here is my rom that in use

[z87-d3hp-f7-1669.fd](#)
