Please read the notes in the first post regarding 10.14.4!

The GTX 660 can be supported in Mojave but there are huge issues since High Sierra. You can find a lot of information on that through the internet or forum search.

Thank you.

I see. So I have two options now: downgrade to 10.12 or change video card.

My choice is downgrade to 10.12 and waiting for video card driver update or an opportunity for change hardware, because of 10.12 is so perfect and noneed for upgrade video card.

At least I have the conditions for the upgrade, just waiting for an opportunity.

Thank you again.
