## **Matebook 13 [i7 8565U, 8GB RAM, Intel® UHD Graphics 620] - schaffe es nicht in den Installer**

**Beitrag von „yoqueco“ vom 3. Mai 2019, 15:52**

I cloned Mojave 10.4.4 from another laptop of mine with Hackintosh. Replacing the whole CLOVER folder in the EFI folder, Mojave 10.4.4 boots+, from a USB disk in my Matebook 13, with QE/QI. There is still some work to do to get brightness control and other things, but Mojave 10.4.4 runs smoothly in Matebook 13.
