

OpenCore Bootloader aktuelle und ältere Versionen

Beitrag von „Noir0SX“ vom 24. Mai 2019, 17:18

v0.0.2

- Documentation improvements (see Differences.pdf)
- Platform information database updates
- Fixed misbehaving Debug -> Target enable bit
- Added `ResetLogoStatus` ACPI quirk
- Added `SpoofVendor PlatformInfo` feature
- Replaced `ExposeBootPath` with `ExposeSensitiveData`
- Added builtin implementation of Data Hub protocol
- Dropped `UpdateSMBIOSMode Auto` mode in favour of `Create`
- Fixed SMBIOS CPU detection for Xeon and Core models
- Moved `ConsoleControl` configuration to `Protocols`
- Added `Security` -> [ScanPolicy](#) preference
- Fixed invalid `board-rev` exposure in Data Hub
- Fixed SMBIOS Type 133 table exposure
- Added support for SMBIOS Type 134 table exposure

WARNING: This release is a developer preview, i.e. it targets experienced engineers and developers. Configuration and feature set are under works, i.e. refinements are expected to happen with 1.0.0 release.
