

# **[SUCCESS] Gigabyte Z390 M Gaming + RX 580 Nitro+ [EFI im Anhang]**

**Beitrag von „Kazuya91“ vom 29. Mai 2019, 16:32**

trebla

Its that way because the config.plist is configured that way. You can set a timer. Download clover configurator, mount the EFI of the SSD with it and open the config.plist (which you can find on the EFI of the SSD) with Clover Configurator. Then go to the section "boot". You can then activate a timer on the right side. Dont forget to save the changes
