Intel HD 4000 Notebook

Beitrag von „Eddi29“ vom 17. Juni 2019, 22:53

Also ich habe die Lösung für alle die ein Lenovo B580 haben .

Auf insanelymac

Danek EaseYourPain trotzdem

For HD 4000 need write in config plist with clover configurator

Ig-platform- 0x01660003

and

Load vbios[+]

Patch Vbios[+]

inject EDID [+]

inject Intel[+]

and after reboot see 1366x768

Extract your DSDT compile it and put in EFI/Clover/ACPI/patched/

PATCH in your DSDT This sections:

DTGP

HPET (for pm)

HDEF(layout 12 for audio)

ARPT(for 9285 wifi)

(All this patches from REHABMAN repo credits to Rehabman!)

For speedstep i use Clover method.

Open config plist with Clover configurator go to ACPI section and select:

DROP oem+

Generate c states

Generate p states

Enable C6,C7

Patch APIC

and then you can delete nullcpupowermanagment
