macOS Mojave Ozmosis BETA – OZ167X-XMAX

Beitrag von „kuckkuck“ vom 8. Juli 2019, 14:02

You have to read carefully, the KernnextPatcher itself (and the plist) needs to be updated. So you have to replace the old KernnextPatcher driver in your ROM with the new one.

Also there's a new optional Ozmosis version provided in the thread. Read carefully though on how to use it (it needs additional drivers), the version is not necessary but enhanced.

Open Core shouldn't be used out of the FV for now but future releases may provide this functionality.

If you have any more questions regarding Catalina, please post them in the dedicated thread
