Asus P8P67 Deluxe Modded Bios 2303

Beitrag von „gios“ vom 15. Juli 2019, 06:56

Good morning. After time I would like to create the Mac. I also have the asus p8p67 deluxe. I recently updated the bios.

I tried to install your USB USB phone on the yatkos website. The apple comes out when you play with us and then with the game.

Besides the HD on ahci do I have to set something else in the bios?

Thank you. Thank.
