

Thunderbolt HOT-PLUG bei Onboard Thunderbolt Chip!

Beitrag von „vit9696“ vom 8. August 2019, 23:03

DSM2 sorry for jumping in, but could you please do clarify why this kind of secrecy is involved in the matter? Is it just that you need some time/will to do a proper write-up for the problem? Or perhaps it is quite a bit complicated and more thought is needed to make it useable by everyone? I believe that we could work it out together =)

Just, I mean, if neither of these, the situation is awkward at least. If you look around, the development community is not hiding their research from others for obvious reasons. Avarice of this kind sounds like a disgrace for everyone involved in macOS community development, including Download-Fritz and myself. Obviously I did not want to offend you in case I misunderstood something.
