Black Screen UHD630 -> Dell OptiPlex 3060 Core i5

Beitrag von „Drovosek01“ vom 15. August 2019, 17:43

Hey, guys.

I managed to get the graphics to work properly on the Dell Optiplex 3060 i5-8500 system unit. I put the EFI folder and the user manual here. Unfortunately I no longer have access to this system unit. Can someone make a report (preferably in English or Russian) in AIDA64 and share it? I'm wondering what model Bluetooth and WIFI are.
